Multivariate

statistics - Wikipedia

Descriptive statistics is the summarising and organising of the characteristics of a dataset. Data set is a collection, or a set of responses, hypotheses, or observations from a limited number of samples or an entire population (Mishra et al.2019).. While conducting quantitative research, the first step is the

in France by Jean-Paul Benzécri and his collaborators; it is the central part of the French “Analyse des Données,” or in English, geometric data analysis (cf. Benzécri et al. 1973; Greenacre 1984, 2007; Lebart et al. 1984; Le Roux and Rouanet 2004). The method can be applied to any data table with nonnegative entries.
