

Prentice Hall Properties Of Gases Section Review Answers

Eventually, you will entirely discover a extra experience and achievement by spending more cash. still when? reach you bow to that you require to get those every needs when having significantly cash? Why don't you try to acquire something basic in the beginning? That's something that will lead you to comprehend even more in this area the globe, experience, some places, once history, amusement, and a lot more?

It is your categorically own period to perform reviewing habit. in the course of guides you could enjoy now is **prentice hall properties of gases section review answers** below.

Sacred Texts contains the web's largest collection of free books about religion, mythology, folklore and the esoteric in general.

Prentice Hall Properties Of Gases

Properties of Gases Prentice-Hall Chapter 14.1 Dr. Yager Objectives Explain why gases are easier to compress than solids or liquids Describe the three factors that affect gas pressure Compressibility Compressibility is a measure of how much the volume of matter can decrease under pressure.

Prentice Hall Properties Of Gases Section Review Answers

The effusion rate of a gas is inversely proportional to the square root of its molecular mass. The volume of a gas increases as the pressure on that gas decreases.

Gases are easily , or squeezed into a smaller volume 1. because of the between particles in a gas. The four variables 2. used to describe a gas are pressure, (P), (V), (T), 3. and number of (n). 4. You can use theory to predict and explain how gases 5. will respond to a change in conditions. Doubling the amount of 6. gas in a rigid container ...

1B: The Kinetic Model The behavior of ideal gases is explained by the kinetic molecular theory of gases. Molecular motion, which leads to collisions between molecules and the container walls, explains pressure, and the large intermolecular distances in gases explain their high compressibility.

SECTION 14.1 PROPERTIES OF GASES(pages 413-417) This section uses kinetic theory to explain the properties of gases. This section also explains how gas pressure is affected by the amount of gas, its volume, and its temperature. Compressibility(pages 413-414)

THE BEHAVIOR OF GASES 14

Atmosphere - envelope of gases that surrounds the planet; very thin layer. Composition of the Atmosphere - Made up of a mixture of atoms and molecules of different kinds Made up of nitrogen, oxygen, carbon dioxide, water vapor, and other gases, as well as particles of liquids and solids.

Chapter 14 The Behavior of Gases147 SECTION 14.1 PROPERTIES OF GASES(pages 413-417) This section uses kinetic theory to explain the properties of gases. This section also explains how gas pressure is affected by the amount of gas, its volume, and its temperature. Compressibility (pages 413-414) 1. Look at Figure 14.1 on page 413.

SECTION 14.1 PROPERTIES OF GASES(pages 413-417)

At constant volume, temperature and pressure are directly proportional. For example, if the temperature of a gas increases, then the pressure increases. Work Step by Step At constant volume, temperature and pressure are directly proportional.

14.1 Properties of Gases >Compressibility Gases are easily compressed because of the space between the particles in a gas. • The distance between particles in a gas is much greater than the distance between particles in a liquid or solid. • Under pressure, gas particles are forced closer together.

particles of an ideal gas is negligible compared to the total volume in which the gas is contained. ____11. The kinetic theory of gases assumes that, during a collision between two particles, kinetic energy is transferred without loss from one particle to the other. 9 8 7 6 5 4 3 2 1 THE PROPERTIES OF GASES SECTION REVIEW 12.1

12.1 The Properties of Gases Section Review

Real Gases Real gas, in contrast, has real volume and the collision of the particles is not elastic, because there are attractive forces between particles. As a result, the volume of real gas is much larger than of the ideal gas, and the pressure of real gas is lower than of ideal gas.
